Manitoba

I. EXECUTIVE SUMMARY

Population and demographic projections have been prepared for the eight Economic Regions of Manitoba for the period 2006-2026. These projections are compatible with the Manitoba population projections prepared by the Manitoba Bureau of Statistics (Manitoba Population Projections 2006 to 2026, MBS 2006-3, December 2006).

At the provincial level, the projection assumptions made were:

a) A constant total fertility rate of 1.80.
b) Net international migration increases to 10,300 by 2009 and then increases by 1,000 every two years for the remainder of the projection period.
c) Net interprovincial migration moderates to –3,500 by 2011 and remains at this level for the rest of the projection period.
d) The life expectancy at birth increasing by 0.9 years for females and by 1.8 years for males.

MBS projects that Manitoba's population will increase by 263,000 persons or 22.5% between 2006 and 2026. In 2026, the population of Manitoba is projected to be 1,441,000.

All regions, with the exception of **Parklands** and **Southwest,** are projected to have increases in population by the end of the projection period. The **Parklands** region is projected to decrease by 3,000 persons or 6.9% between 2006 and 2026. The population decline is due to a natural increase averaging -70 per year combined with a projected annual net migration loss of -70 persons.

The **Southwest** region is expected to record a population decline of 1.6%. This region's population is projected to decrease by 1,700 persons from its 2006 population of 105,900. All of this decline will occur in the first nine years of the projection period after which the population begins to slowly increase but not enough to offset the initial loss.

The smallest projected percentage population increase will be for the **North**. This region is expected to add 5,500 persons to its 2006 population of 85,900. This will result in a growth rate of 6.4%.

The **North Central** and **Interlake** regions are projected to have population increases of 5,400 (10.8%) and 13,755 (15.7%) respectively between 2006 and 2026. Both of these percentage increases are below the projected Manitoba population increase of 22.4% for the same time period.

The percent change in population for the **Winnipeg** and **Southeast** regions are both projected to be above the provincial percent change of 22.4%. **Winnipeg** is projected to grow by 29.2% (up 190,700 persons) between 2006 and 2026. The **Southeast** is projected to increase by 32.0% (up 30,600 persons). Winnipeg's share of the total population of Manitoba will grow from 55.4% in 2006 to 58.5% in 2026.

The **South Central** region will have the largest projected percentage population increase at 39.2% (up 22,000 persons over the 2006 population of 56,100). This region's share of the population will increase from 4.8% to 5.4% over the projection period.

II. INTRODUCTION

This report presents population projections and demographic components for the eight Manitoba Economic Regions during the period July 1, 2006 - June 30, 2026. The eight Economic Regions (also known as Official Regions for Data Collection) are aggregations of the 23 census divisions as follows:

ECONOMIC REGION	CENSUS DIVISIONS	2006 BASE POPULATION	PERCENT (%) DISTRIBUTION
Southeast	1, 2, 12	95,700	8.1
South Central	3, 4	56,100	4.8
Southwest	5, 6, 7, 15	105,900	9.0
North Central	8, 9, 10	50,300	4.3
Winnipeg	11	652,400	55.4
Interlake	13, 14, 18	87,700	7.4
Parklands	16, 17, 20	43,900	3.7
North	19, 21, 22, 23	85,900	7.3
Manitoba Total		1,177,800	100.0

These regional projections are compatible with the Manitoba population projections recently released by the Manitoba Bureau of Statistics (MBS 2006-3, December 2006). The base population for these projections is the Statistics Canada 2006 Post-Censal population estimate of 1,177,800 for Manitoba. This population has been distributed on a regional basis.

Projections are not forecasts but are based on what would occur if the stated assumptions hold true. As the process of change is cumulative, the reliability of the projection may decrease over time. For example, precisely projecting the number of international immigrants and the volumes of persons moving between provinces is a difficult process. Predicting the age profile of migrants is also subject to error.

The Manitoba Bureau of Statistics reviews these population projections annually. Revisions will be made when necessary.

To obtain further information on this report, please contact Jacqueline Storen at (204) 945-2396.

JANUARY 2007

III. PROJECTED REGIONAL POPULATION 2006 - 2026

Table 1 illustrates the annual estimated and projected population for Manitoba and its Economic Regions over the period 1996 to 2026. During the period 2006 to 2026, the population of Manitoba is projected to increase by 263,200 persons or 22.4%.

Based on the projected population changes displayed in Chart 1, the eight regions fall into three groups. Group one is composed of those regions that are projected to grow at a faster rate than the province as a whole during the projection period. Group two consists of those regions that are projected to grow over the projection period but at less than the provincial rate of growth. The last group contains those regions that are projected to have a decrease in population.

The regions in group one are Southeast, South Central and Winnipeg. The Southeast will grow by 32.0%, for an increase of 41,800 persons. South Central is expected to add 26,200 residents, for total growth of 39.2% over the projection period. Winnipeg, which includes the Rural Municipality of Headingley, is projected to exceed 700,000 persons by 2014.

These regions are also projected to increase their share of Manitoba's population (as shown in Chart 2). Winnipeg's share of the total population is projected to increase by 3.1 points to 58.5% in 2026. The Southeast's share will increase by 0.6 percentage points (from 8.1% to 8.8%) while South Central's share will rise by 0.7 points (from 4.8% to 5.4%).

The regions in group two are North Central, Interlake and North. These regions are projected to grow at a slower pace than the province as a whole. The population of the North Central region is projected to increase by 10.8% (5,400) over the projection period. From a 2006 base of 87,700, the population of the Interlake is projected to increase 13,700 (15.7%) by the year 2026. The North is expected to grow by 5,500 persons or 6.4%.

During this time period, the North Central's share of Manitoba's population is projected to decrease slowly to 3.9% in 2026 from 4.3% in 2006. The Interlake will see its share decline 0.4 percentage points, from 7.4% in 2006 to 7.0% in 2026. The North is projected to have a population share decrease from 7.3% to 6.3% by the year 2026.

Group three consists of the two remaining regions; Parklands and Southwest. The population of Parklands is projected to fall 3,100, for a 6.9% decline from it's 2006 population. The population of Southwest is projected to decrease by 1,700 persons, which is 1.6% of the 2006 population of 105,900.

The Parklands' share of Manitoba's population will show a gradual decline, from 3.7% of Manitoba's population in 2006 to 2.8% by the year 2026. The Southwest's share is projected to decrease from 9.0% in 2006 to 7.2% by 2026.

The regional age structure for these projections is mainly affected by two assumptions. These are the Manitoba fertility rate being below replacement level and an increasing life expectancy. As a result, all regions (with the exception of Parklands) are projected to have a decrease in their share of population that is composed of zero to fourteen year-olds. Conversely, an increase is projected for persons sixty-five years and older for all regions (with the exception of South Central) (see charts 9 and 10).

In particular, the Interlake region is projected to have the largest increase in the proportion of seniors (persons 65 and older), from 14.9% in 2006 to 22.4% in 2026. The North region follows closely behind the Interlake with an increase of 6.1 percentage points, from 5.3% of their population composed of seniors in 2006 to 11.4% in 2026. Other regions projected to have significant gains in their senior population are the North Central (12.8% to 18.7%) Southwest (17.1% to 21.9%) and Southeast (12.1% to 16.6%). The proportion of seniors in Winnipeg will increase from 13.7% in 2006 to 16.9% in 2026.

For the 0 to 14 year-olds, all regions with the exception of Parklands, are projected to record decreases but these declines are not as significant as the growth in seniors.

The projected ageing of the population will increase the regional median age. The median age is such that exactly half of the population is older and the remaining half is younger. Provincially, the median age is projected to increase by 1.3 years over the projection period, from 37.3 in 2006 to 38.6 in 2026.

Five of the eight economic regions are projected to record increases in their median ages. The greatest increase in median age is projected for the North, from 26.4 in 2006 to 28.5 in 2026; an increase of just over two years. Other regions projected to have significant growth are Winnipeg (37.9 to 39.9), Southwest (40.1 to 41.4), South Central (34.0 to 34.7) and North Central (36.2 to 36.9)

Three regions are projected to see their median ages decrease. The Parklands is projected to record a drop of three years in its median age, from 43.2 in 2006 to 40.2 in 2026. The median age in the Interlake is projected to decline by nearly two years, from 41.9 in 2006 to 40.0 in 2026. The Southeast will record a small decline, from 36.8 in 2006 to 36.6 in 2026.

Regional age structures can be displayed graphically by an age pyramid. The age pyramids in Appendix E illustrate that the age structures differ between the regions. To illustrate, Charts 7 and 8 compare the age structures of Winnipeg and the North. The North region has proportionally more younger persons than Winnipeg.

Total net migration is projected to have a significant impact on most of the regions. At the provincial level, net migration is projected to rise throughout the projection period. By 2026 it is expected to total 14,800 persons annually. Significant positive net migration is projected for Winnipeg, the Southeast and South Central regions, while the North is projected to observe negative net migration. The remaining regions are projected to have relatively smaller net migration totals.

Details of the projected regional populations are presented in Appendices A through E.

IV. PROJECTED POPULATION COMPONENTS ASSUMPTIONS

i) BIRTHS

This section presents the projected births for the eight Economic Regions to the end of the projection period. For projection purposes, the number of births is determined by the number of females 15 - 49 years of age, the total fertility rate, and the age specific distribution of the total fertility rate.

The total fertility rate for each region is shown in Table 2 below, with the projected rates being the estimated rates for 2001 adjusted in order to reflect the projected constant fertility rate at the provincial level. The age specific distribution of the total fertility rate is the latest 5 year average for Manitoba.

With these assumptions, the projected number of births is solely determined from the number of females in each age category between 15 and 49 years of age.

TABLE 2: TOTAL FERTILITY RATES BY REGION

	OBSERVED					PROJECTED
REGION	1981	1986	1991	1996	2001	
Southeast	2.25	2.21	2.11	1.99	2.16	1.95
South Central	2.51	2.26	2.34	2.32	2.27	2.00
Southwest	2.03	1.90	1.87	1.77	1.64	1.63
North Central	2.24	2.21	2.24	2.39	2.26	2.15
Winnipeg	1.58	1.67	1.79	1.68	1.59	1.58
Interlake	1.85	2.00	1.68	1.96	1.82	1.82
Parklands	2.28	2.40	2.04	1.87	1.67	1.90
North	2.89	2.61	2.97	2.99	2.91	2.75
Manitoba	1.86	1.89	1.95	1.89	1.80	1.80

At the provincial level, a constant total fertility rate of 1.80 coupled with a steady increase in the number of females of child bearing age will result in a projected increase in the number of births from 13,940 in 2006 to 16,600 by 2026.

The Southeast, South Central and Interlake regions will all have marked increases in the projected number of births. The Southeast will increase by 550 per year or 48.7% over the 2006 level of 1,130. The Interlake will increase by 410 or 52.6% over the 2006 level of 780. The South Central region will increase by 330 or 44.0% over the 2006 level of 750. In contrast, Winnipeg births are projected to grow by 17.5% between 2006 and 2026.

In the Southwest and Parklands, the number of births per year is projected to peak in 2015 at 1,150 births in the Southwest and 510 in the Parklands. In 2006, the number of births in the Southwest was 1,080 and 460 in the Parklands. After 2015, the number of births is projected to decrease to levels similar to 2006, with 1,030 in the Southwest region and 460 in the Parklands Region.

However, the North Central region is projected to peak in 2019 at 800 births per year, 150 more than in 2006 and above the projected 780 births for 2026. The North follows a similar pattern with the annual number of births projected to grow to 1,900 by 2020 before decreasing to 1,870 by 2026. In 2006, the number of births in the North totalled 1,830.

Detailed information on the number of births by region can be found in Table A1 in Appendix A.

ii) DEATHS

This section presents the projected number of deaths for each of the Economic Regions. For projection purposes, the number of deaths is derived from the life expectancy at birth for each region.

From the life expectancy tables, survival rates by sex and single years of age were determined. These survival rates are then used as the probability of a person being alive at the start of the following year.

During the next 20 years, moderate increases in life expectancy at birth have been projected. These increases are 0.8 years for females and 1.6 years for males at the provincial level. The North will record the largest increase in life expectancy, 3.7 years for females and 5.6 years for males.

TABLE 4: LIFE EXPECTANCY AT BIRTH BY REGION (In Years)

	FEMALE		MALE	
REGION	2006	2026	2006	2026
Southeast	81.5	82.1	75.9	77.2
South Central	81.5	82.1	75.9	77.2
Southwest	81.6	82.2	76.0	77.2
North Central	81.5	82.2	76.0	77.2
Winnipeg	81.5	82.1	75.9	77.2
Interlake	81.5	82.1	75.8	77.2
Parklands	81.6	82.2	75.9	77.2
North	76.7	80.4	69.3	74.9
Manitoba	81.2	82.0	75.4	77.0

The number of annual deaths in Manitoba is projected to increase by 21.1% or 2,210 deaths between 2006 and 2026. On a regional basis, the number of deaths in the South Central, North Central, Winnipeg and North regions are projected to grow in a similar manner over the next 20 years. The number of deaths in Winnipeg is projected to grow by 23.7% or 1,370 deaths per year, followed by projected increases of 24.4% (up 100) for North Central, 16.8% (up 80) in the North and 14.3% (up 70) in South Central.

The number of annual deaths in the Southeast and Interlake regions are each projected to increase by 360 (up 50.7%) and 320 (up 39.5%) per year between 2006 and 2026, respectively.

Conversely, the Parklands and Southwest are each projected to record fewer annual deaths by the end of the projection period. Over the next twenty years, the number of deaths in the Parklands will decrease by 13.3% or 80 deaths per year by 2026. The number of deaths in Southwest is projected to decrease by 10 per year or 0.8% by the end of the projection period.

Detailed information on the number of deaths by region can be found in Table A2 Appendix A. In addition, natural increase (births minus deaths) by region can be found in Table A3.

MIGRATION SCENARIOS

As the most significant component of population growth, migration has the greatest impact on the year-to-year change in the population of Manitoba's regions.

For these regional projections, the migration scenarios have been developed using the IN and OUT flows for each of the three components: international, interprovincial and intraprovincial. However, in this report only the net figure is presented for each migration component.

The data presented are based on estimates of the regional migration distributions for the five year period July 2001 to June 2006. With the exception of international immigration, each projected regional distribution was calculated by averaging its historical percentage distribution over the five year period July 2001 to June 2006. For international migration, some adjustments were made to the five-year averages to better reflect recent departures from historical trends. The final data for the projection period was then calculated from the regional distribution and the projected Manitoba level for each component.

iii) INTERNATIONAL MIGRATION

TABLE 5: INTERNATIONAL MIGRATION BY REGION 2001 TO 2006

	IMMIGRATION(*)		EMIGRATION	
REGION	5 YEAR AVERAGE	PERCENT DIST'N (%)	5 YEAR AVERAGE	PERCENT DIST'N (%)
Southeast	945	12.0	87	6.6
South Central	692	8.8	38	2.9
Southwest	279	3.6	75	5.7
North Central	72	0.9	36	2.7
Winnipeg	5,536	70.5	975	73.9
Interlake	197	2.5	56	4.3
Parklands	63	0.8	13	1.0
North	71	0.9	39	3.0
Manitoba	7,855	100.0	1,317	100.0

* Includes immigrants (annual average 6,744), Returning Canadians (average 874) and net change in the number of non-permanent residents (average 799).

The projected regional distributions for international immigration were phased in over a four year period from 2006 to 2010, after which the distributions remain constant to the end of the projection period. Only three of the regions were projected to depart significantly from the percent distribution in Table 5. They were Winnipeg, Southeast and Interlake. Table 6 shows the estimated regional distribution for 2004/05 and the projected regional distributions for 2009/10.

TABLE 6: REGIONAL DISTRIBUTION OF INTERNATIONAL IMMIGRATION

	PERCENT DIST'N (%)	
REGION	2004-2005 (estimated)	2009-2010 (projected)
Southeast	10.58	6.00
South Central	8.11	7.00
Southwest	3.40	3.00
North Central	0.81	1.00
Winnipeg	73.35	80.00
Interlake	2.64	1.00
Parklands	0.44	1.00
North	0.68	1.00
Manitoba	100.0	100.0

On average, nearly 70.0% of international migrants to Manitoba in the last 5 years have moved to Winnipeg. However, over the last few years larger proportions of these immigrants have been choosing areas outside of Winnipeg as their destination. In particular, the Southeast and South Central regions have recorded significant increases in international immigrants and are expected to maintain these increases over the medium term.

Although a small component of population growth for the remaining regions, it is projected that all regions will have positive international migration throughout the projection period. This is due to the significant increase in international immigrants expected over the next twenty years.

Immigration is projected to increase steadily over the entire projection period, from 8,884 in 2005/06 to 19,000 in 2025/26. This steady growth reflects the anticipated increase in international immigrants, particularly the Provincial Nominee Program where most of the growth is expected.

Detailed information on net international migration by region can be found in Table A4 Appendix A.

iv) INTERPROVINCIAL MIGRATION

Interprovincial migration along with international migration is a major component of migration growth and can have a significant impact on the year-to-year change in the populations of Manitoba's regions.

Table 7 shows the recent distribution of net interprovincial migration by region for the period 2001 to 2006. As can be seen, all regions lost population due to interprovincial migration during this time period.

TABLE 7: INTERPROVINCIAL MIGRATION BY REGION 2001 TO 2006

	IN		OUT	
Region	5 YEAR AVERAGE	PERCENT DIST'N (%)	5 YEAR AVERAGE	PERCENT DIST'N (%)
Southeast	721	5.4	974	5.3
South Central	446	3.3	613	3.3
Southwest	1,639	12.2	2,115	11.4
North Central	398	3.0	545	2.9
Winnipeg	7,779	57.7	11,080	59.5
Interlake	670	5.0	814	4.4
Parklands	621	4.6	833	4.5
North	1,198	8.9	1,628	8.8
Manitoba	13,473	100.0	18,602	100.0

Currently, Manitoba's net loss is mainly being driven by Alberta's strong economy. However, it is expected that these losses to Alberta will not continue indefinitely but taper off over time. In addition, there is also concern that Statistics Canada's net interprovincial migration losses for Manitoba are overstated and do not reflect the dynamic nature of our interprovincial movements

Based on the above information coupled with an ageing population (less propensity to migrate), the assumption for annual net interprovincial migration was moderated to -3,500 by 2011/12. It will then remain at this level for the rest of the projection period.

Winnipeg, which had the largest interprovincial migration loss of -4,730 for 2004/05, will moderate to -2,400 by the year 2011/12. The outflow for the Southwest is projected to be next highest at -400, followed by the North, with a projected outflow of -350.

The Interlake and Southeast regions are projected to have smaller outflows of -150 and -90 respectively, over the projection period.

The South Central, North Central and Parklands regions are projected to have the smallest outflows; -50, -60 and -60 respectively.

Detailed information on net interprovincial migration by region can be found in Table A5 Appendix A.

iv) INTRAPROVINCIAL MIGRATION

Table 8 illustrates the net intraprovincial migration (movements of Manitobans between regions of Manitoba) for the 5-year period 2001 to 2006.

During this period, Southeast, Southwest and Interlake registered population gains from intraprovincial migration. The remaining regions recorded net losses, with the North having the largest average loss at -760 persons annually.

TABLE 8: INTRAPROVINCIAL MIGRATION BY REGION 2001 TO 2006

	IN		OUT	
Region	5 YEAR AVERAGE	PERCENT DIST'N (%)	5 YEAR AVERAGE	PERCENT DIST'N (%)
Southeast	3,471	13.2	2,965	11.3
South Central	1,068	4.1	1,157	4.4
Southwest	2,416	9.2	2,145	8.1
North Central	1,741	6.6	1,812	6.9
Winnipeg	9,643	36.6	9,931	37.7
Interlake	4,071	15.5	3,428	13.0
Parklands	1,336	5.1	1,547	5.9
North	2,583	9.8	3,343	12.7
Manitoba	26,328	100.0	26,328	100.0

Intraprovincial flows between Manitoba regions are projected to be 24,000 for the projection period. This will result in slightly smaller projected population flows than shown in Table 8 above.

The North is projected to have a significant net intraprovincial outflow for the entire projection period, with an annual net loss of -750 persons. The South Central, Parklands and North Central regions are projected to have more moderate net outflows of -240, -170, and -70 respectively for the same time period.

Meanwhile the Interlake is projected to have a net intraprovincial inflow of 700 persons per year from 2005/06 to 2025/26. The Southeast, Winnipeg and Southwest regions are projected to have net inflows of 300, 160 and 70 persons per year respectively, during the same period.

Detailed information on net intraprovincial migration by region can be found in Table A6 Appendix A.

iv) TOTAL MIGRATION

Total migration is the sum of the three migration components as described on the previous pages. In terms of migration, the regions can be arranged into three categories.

The first category is projected to have significant positive total migration and consists of the Winnipeg, Southeast, South Central and Interlake regions.

- Net migration to Winnipeg is projected to increase from 2,730 in 2006 to 12,470 by 2025. As a result of migration, Winnipeg will add a total of 162,510 persons to its population over the next 20 years. This is the largest gain of all eight regions.

- For the Southeast, a net value of 580 for 2006 will steadily rise to 1,300 persons by 2025. This would result in the second largest total population gain from migration; 19,460 new residents over the projection period.

- For the South Central region, net migration of 340 persons in 2006 is projected to increase to 1,060 persons by 2025. This results in a population gain of 13,970 persons over the projection period, due to net migration.

- The Interlake region is projected to grow from its 2006 level of 400 persons to 680 by 2025. The total population gain from migration is projected to be 12,020.

The second category is projected to have relatively smaller migration flows for the projection period and consists of the Southwest and North Central regions.

- The Southwest is projected to have an inflow of 200 persons per year by 2025. However in the first seven years of the projection period, net migration is negative and declines from -500 in 2006 to -10 in 2012, after which it steadily increases to 200 persons by 2025.

- Similarly, the North Central region has a net migration loss for the first nine years of the projection period before rising to 50 persons by 2025.

The third category is projected to lose a significant portion of its population to migration, mainly to other provinces and other regions of Manitoba. The North and Parklands regions fall into this category.

- The North has a total projected migration loss of -21,040. This will be the result of repeated annual net losses starting with -1,390 in 2006 and then decreasing to -950 by 2025.

- In the Parklands, an outflow of -270 in 2006 dropping to 0 by 2025 will lead to a total projected loss of -1,600 over the entire projection period.

Detailed information on total net migration by region can be found in Table A7 Appendix A.
